

DEEP DOWN YOU WANT THE BEST.

X-TEK PURE TEK

X-TEK FORM TEK

PRO TEK & EXTREME PRO TEK

PREMIUM X-TEK SYSTEMS.

Our X-TEK line is based on many years of experience and the expertise of SCUBAPRO's engineers. The X-TEK systems fit every tech diving philosophy – without sacrificing quality, durability, ease of use or overall diving comfort. Choose from our standard configurations or come up with your own combination of harness, wings, and accessories to create your personal tech system.

UNLIMITED FREEDOM WITH SIDEMOUNT.

X-TEK SIDEMOUNT SYSTEM.

Maximum maneuverability under water, a better streamlined shape, less back strain, easier entry into the water, and increased under water safety – the X-TEK sidemount system by SCUBAPRO delivers the ultimate diving experience.

DO YOU FIND THESE SCENES FASCINATING AS WELL?

These images were taken at the slate quarry in Nuttlar, Germany. With about 7.5 miles of flooded mining area and haulage roads, it is Europe's second largest divable quarry. All the equipment that the miners once used is still there today making this a unique experience. Dive through the world of the miners. For more information visit: www.bergwerktauchen.de.

PURE ADVENTURE

DIVING IN NEW DIMENSIONS.

Sidemount diving was initially developed for cave divers who needed better maneuverability in very small spaces. The tank or even several tanks are carried on the side instead of the back. This way, the diver can easily navigate through very narrow areas. Since then, sidemount diving has evolved from the tech scene to become a trend. More and more recreational divers are discovering the advantages of this new way of diving!

Entering the water is a lot easier, as the tank is put into the water beforehand and then attached to the side of the sidemount system using carabiners. This also spares strain on the back, as you don't have to carry a heavy jacket. In the unlikely event of a problem with the air supply under water, the valve of the tank can be accessed quickly and easily. This increases your own safety.

Plus there is the extreme sense of freedom under water! You don't feel any weight on your back, are not constrained by anything, and won't even notice the tank on the side - you experience pure weightlessness and freedom!

The modular system was developed in collaboration with leading sidemount cave divers. All system components are sold separately and are fully compatible, so that every diver can build their ideal configuration.

TOP FEATURES FOR UNFORGETTABLE ADVENTURES.

Modular concept with compact, independent wings in 12 and 20 liter capacity: So every diver finds their dream configuration.

Wing made of 1000 DEN Cordura and inner bladder of Soltan: The materials are extremely robust, durable, and stretchy.

Soft Airnet backpack for maximum comfort: The open air chambers provide the padding for the backpack. As the water can flow through and drain away, no air bubbles can form, so the backpack will not produce any lift.

Compatible with X-TEK backplates: Conversion for backmount diving is easy.

Eyelets, D-rings, and handles made out of stainless steel: For guaranteed durability.

Newly designed, balanced power inflator: Responds even faster.

Newly designed, swivel, narrow elbow: For a better streamlined shape and an individually adjustable inflator position.

Sufficient bungees and hooks for tanks and side bungees: Easy handling and better streamlined shape.

Harness with crotch strap: For the perfect fit.

Special fabric cover: Optimises the shape and protects the wing.

X-TEK SIDEMOUNT SYSTEM

"In addition to the high quality SCUBAPRO is known for, the system boasts an independent design, strong buoyancy compared to similar systems, and superior comfort.

The SCUBAPRO X-TEK sidemount system is my number one choice for any sidemount application, whether for recreational diving or for technical sidemount dives."

Achim Schlöffel, President: InnerSpace Explorers, world record holder

"In my career as a diver spanning more than 30 years I was always able to rely on SCUBAPRO products. I was fortunate enough to contribute to the development of many SCUBAPRO buoyancy systems. They were developed with lots of passion for detail, and I'm not only happy to use these modular systems, but also to recommend them to my dealers and customers."

David Rhea, GUE - Training Council and member of the board of directors
